BIOZYME

EFFECTIVE, ORGANIC WASTE REMOVING COMPOUND

Biozyme is a stable, liquid mixture of bacteria and enzymes specifically and carefully selected to work in a synergistic manner, in order to effectively break down organic wastes. This pleasantly perfumed product represents a uniquely effective natural method of treatment that is safe to use, and reduces the requirement to use harsh chemicals in sensitive environments - a truly modern answer to the age-old problem of unpleasant smells and odours arising from organic wastes.

Biozyme will safely and effectively remove organic wastes such as blood, faeces, urine and organic waste due to biological breakdown of tissue in the deceased. Biozyme may also be used to soak laundry stained and contaminated by biological matter.

FEATURES

Highly effective organic digester

Versatile

Pleasant odour

No hazardous ingredients

Biodegradable

Concentrated

Continuous action

BENEFITS

Removes organic matter from all surfaces.

Can be used treat all areas of contamination.

Immediately effective

Safe and user friendly

Environment friendly

Economical in use

May be used to treat waste systems

APPLICATIONS

Biozyme is the ideal answer to difficult waste and contamination problems. The bacteria and enzymes are harmless and cause no damage to delicate surfaces. They penetrate all absorbant surfaces, effectively digesting all organic matter and waste, removing organic matter and the source of unpleasant smells
